

## **Software Developer**

### Company

Clevor Technologies, Inc. ([www.clevor.com](http://www.clevor.com)) is delivering advanced technical solutions to a ubiquitous problem faced by many businesses around the world. Our Schedule Optimization technology dramatically reduces the cost of rolling out large scale projects or managing production facilities while improving due date performance and management control. Our customers are in construction, manufacturing and professional services industries. With some of the largest companies as our customers, we are experiencing rapid growth which will result in great future prospects.

### Job description

Full time software developer responsible for maintaining and expanding the front-end components of Clevor's scheduling software, as well as interacting with customers in development and support roles. The front-end components consist mainly of the graphical user interface, the interface to the customer's schedule management software, and the back-end interface. The developer will meet with potential or current customers for consultation on scheduling or software implementations.

### Requirements

- College graduate in Computer Science with excellent academic record.
- 2 or more years of experience as a software developer, 4 or more is preferred.
- Knowledge and experience in .NET, C#, C++, SQL, User Interface Design, and Object Oriented Design.
- Familiar with developing and debugging in a Windows environment.
- Excellent analytical, problem solving and self learning skills.
- Strong communications skills.
- Works well both independently and in a team.
- Knowledge of scheduling in manufacturing, or project management tools such as MS Project or Primavera would be an asset.
- Knowledge of Constraint Propagation is not required but would be an asset.

Located in the beautiful, sunny city of Saskatoon, Clevor offers a stimulating work environment, competitive salaries and great growth prospects!
