

PRESS RELEASE

CLEVOR SCHEDULE OPTIMIZER REDUCES PRESSURE OF SHORTAGE OF SKILLED STAFF

Saskatoon, Saskatchewan, April 26th, 2006 – These days, the media is full of stories about projects announcements worth billions of dollars. However, there are numerous stories about acute shortage of skilled workers, sky rocketing construction costs and project delays also. To make matters worse, it appears that these problems are likely to continue for some years and may even become worse.

Fortunately, there is an intelligent solution. Clevor Technologies Inc., a Canadian company has developed an innovative software solution to combat these problems. What makes this solution especially attractive is that it costs the companies nothing. In fact, it makes them money. A recent user more than doubled their profits while undertaking a project worth millions of dollars. In managing a complex shut down, a company saved millions of dollars in opportunity costs by timely completion of a major mine expansion in spite of some unexpected problems. Yet another company has achieved a significantly better “due date performance” making it their competitive advantage. All these results would be impossible using traditional scheduling solutions.

Clevor’s solution is being used by companies of all sizes in construction, mining, manufacturing, processing and in professional services businesses. It has also caught the eye of some of the largest companies in North America, such as Boeing, General Electric, Halliburton, Bechtel and AREVA/COGEMA resources and is creating a buzz in the industry among the top decision makers. While Clevor Schedule Optimizer uses some very sophisticated technology, it is fully automatic with unparalleled ease of use.

About Clevor Technologies Inc.

Clevor Technologies Inc. has developed and markets Clevor Schedule Optimizer used by construction companies, maintenance operations, manufacturers and professional services companies. Clevor Schedule Optimizer represents a true breakthrough in scheduling technology. It automatically builds a schedule that “optimizes” a given business objective. These software tools use a patent-pending intelligent systems-based high performance optimization engine developed by Clevor. These solutions provide a compelling value for its users.
